STEEL PRODUCTS

THREADED PRODUCTS

Vulcan Threaded Products, a division of Vulcan Steel Products is a family owned company in Pelham, AL.

When Vulcan Threaded Products was founded in 1978, the goal was simple: to provide fastener distributors in the South with threaded rod along with outstanding service at a competitive price. Over time, Vulcan grew to become a dominant player in the threaded rod market nationwide. Threaded Rod manufactured by Vulcan includes all grades of carbon, stainless, B7/L7 and more.

- **LOW CARBON THREADED ROD AND STUDS**

Vulcan

STEEL PRODUCTS

In 1997, Vulcan expanded into the cold finish steel bar market finding their niche in small diameter rounds. Adding two Schumags in 2001, Vulcan increased the cold finish round size range to 1.250. The first draw bench was installed in Vulcan's Cold Finish Mill to increase the round range to 3 inch diameter. A second draw bench was added in 2005 increasing the round size range to 4 inch diameter.

Vulcan is the only cold finished mill in the country with a round bar size range from .125" through 6". Also in 1997, Vulcan began building a world-class induction heat treating facility. The Heat Treating division now has 5 induction lines that can process .331" through 5 1/8" diameter at lengths up to 62 feet. Among the various markets which the Heat Treating division serves include automotive, fastener, oil and gas, and construction.

COLD FINISHED

- Rounds 1/8" through 6"
- Cold drawn flats 1/2" x 1" - 2" x 4"
- Cold finished flats 1/8" x 1" - 5/8" x 12"
- Squares - 1/8" through 3" and Hexagons: 5/16" through 3"
- Grades: 1018, 1035, 1045, 1117, 1141, 1144, 12L14, 1215, 1541, 8620, ASTM A311-B and 4140 LPA
- Stock Lengths: 12' and 20'; can produce special lengths up to 32'

In addition to the above product offerings Vulcan Cold Finished offers Industrial Quality/Commercial Quality Rounds.
